					6076.21

Map Information

On Tuesday 22 August 2023 (11:56 local time) a wildfire started in a forest area near the monastery of Klesion, on Parnitha mountain, in Attica Region, Greece. The fire has led to the destruction of houses and vehicles in suburb of Fyli. Given the severity of the event, the Copernicus EMS Rapid Mapping service was activated to follow the evolution of the fire. According to the last product delivered in EMSR690 activation, the fire is not active anymore since the 28 August 2023 and 6,193 ha of burnt areas were detected. The CEMS Risk and Recovery service was activated in order to provide a post-wildfire damage assessment over the area.

The present map shows the wildfire delineation and grading in the area of Parnitha Mountain (Greece). The thematic layer has been derived from post-event satellite image using a semi-automatic approach. The estimated geometric accuracy (RMSE) is 6.25 m or better, from native positional accuracy of the background satellite image. The assessed thematic accuracy value is 98.75%, assessed following the Quality Control methodology described in the Final Report (see <https://emergency.copernicus.eu/EMSN170>).
