Wind direction and speed	1 km/h	3 km/h	3 km/h	3 km/h
Temperature and relative Humidity	23° 73%	22° 70%	21° 74%	21° 74%

Data retrieved from ECMWF on August 17, 09:51 UTC. Calculated at: 41°11'06"N, 23°39'42"E.

Event: On the 9 August 2024 at 15:30, a wildfire is reported to have affected Central Macedonia, in Greece. The event started due to lightnings north of Chionochori village and it is still on-going. Due to the difficult terrain and high-altitude, 6 helicopters and 2 aircrafts were mobilized to suppress the fire. Also 23 vehicles with 56 firefighters and 36 ground forces have been used for fire suppression, assisted by municipality vehicles/machinery and volunteer organizations. Copernicus EMS Rapid Mapping is requested to provide fire extent emergency mapping.

Data sources and analysis: Pre-event image: Sentinel-2A/B (2024) (acquired on 16/07/2024 at 09:15 UTC, resolution 10 m). Post-event image: GeoEye-1 © Maxar Technologies, Inc. (2024), (acquired on 17/08/2024 at 09:51 UTC, resolution 2.0 m). This image is used as background image. All images are provided under COPERNICUS by the European Union and ESA, all rights reserved.

The thematic layer has been derived from post-event satellite image using a semi-automatic.

The current burnt area cumulates all burnt area extents from previous post-event products.

Map produced by Planetek Hellas released by SERTIT on the 17/08/2024.

Data Access:

All data displayed on the map(s), as well as the Physiography and Land Use - Land Cover layers, are available in the Crisis Information Package and the Base Layer Package (for reference data). The table above is available in editable format in the Crisis Information Package. All products and data are also available for download on the portal.

Access to the portal

Estimated Population:

Estimated population is based on Copernicus Global Human Settlement Layer (GHSL) dataset. Additional population datasets and analysis are available in the summary table.
