Area of Interest

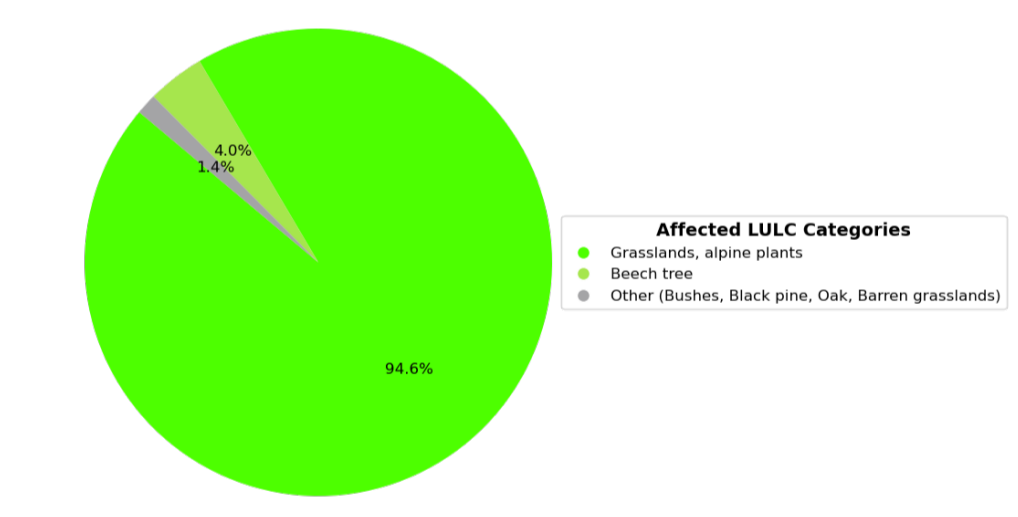

Settlements

Populated Areas

Land-Use / Land-Cover

- | | |
|-------------------|---------------------------|
| Agriculture crops | Chestnut tree |
| Barren grasslands | Grasslands, alpine plants |
| Beech tree | Juniper tree |
| Black pine | Oak |
| Bushes | Settlements |

Affected LULC Categories

Activation reason:

Risk and Recovery Mapping is activated to support the General Secretariat for Civil Protection of Greece for the recovery and restoration planning of the affected area, after the wildfire that occurred between July 17th and July 23rd, 2024.

This overview map shows information on the extent and severity of the wildfire within the specified area of interest. To achieve it, data from the Sentinel-2 satellite were used to map the burned areas and assess the fire using specific burn area indices. A high thematic accuracy was achieved, following the Quality Control methodology described in the Final Report.

Data sources and analysis:

Main input for burned area delineation and grading are recent Sentinel-2 scenes. Tile: T35TKF. Pre-Event Sentinel-2 composite. Acquisition date: 16/07/2024. Post-Event Sentinel-2 composite. Acquisition date: 28/07/2024. Supporting information to summarize affected areas, pre-existing Land Use Land Cover (provided by Authorised User) has been implemented.

Multispectral Sentinel-2 images closest to the date of the fire were used to automatically delineate the perimeter. Subsequently, using thresholding techniques of dNBR and dNDVI indices, the burned area has been segmented based on the damage severity.

Background outside AOI: ESRI Basemap (Esri, TomTom, Garmin, Foursquare, FAO, METINASA, USGS, Maxar)

Disclaimer

Products elaborated in this Copernicus EMS Risk and Recovery Mapping activation are realized to the best of our ability, optimizing the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original sources. No liability concerning the contents or the use thereof is assumed by the producer and by the European Union.

Delivery formats are PDF and vector (ESRI File GDB).
