Consequences within the AOI			
		Unit of measurement	Total in AOI
Flooded area		ha	2517.9
Estimated population		Number of inhabitants	168
Settlements	Residential	ha	3.8
Transportation	Primary Road	km	0.2
	Secondary Road	km	0.0
	Long-distance railway	km	0.0

Map Information
 Due to extensive rainfall and snow-melt of the last few days, and also due to large amounts of water that was released from dams in rivers Evros and Ardas, many areas of Evros Regional Unit have been flooded. Extensive damages are reported in agricultural land, road and railway network. Many embankments across Evros river, broke, causing further problems. The Regional Unit of Evros has been declared in a state of emergency.

The present map shows the flood delineation in the area of Didimoticho (Greece). The thematic layer has been derived from post-event satellite image using a semi-automatic approach. The estimated geometric accuracy is 5 m CE90 or better, from native positional accuracy of the background satellite image.

Disclaimer
 Products elaborated in this Copernicus EMS Rapid Mapping activity are realized to the best of our ability, within a very short time frame, optimising the available data and information. All geographic information has limitations due to scale, resolution, date and interpretation of the original sources. No liability concerning the contents or the use thereof is assumed by the producer and by the European Union.
 Please be aware that the thematic accuracy might be lower in urban and forested areas due to inherent limitations of the SAR analysis technique.
