#### Map Information

Due to extensive rainfall and snow-melt of the last few days, and also due to large amounts of water that was released from dams in rivers Evros and Ardas, many areas of Evros Regional Unit have been flooded. Extensive damages are reported in agricultural land, road and railway network. Many embankments across Evros river, broke, causing further problems. The Regional Unit of Evros has been declared in a state of emergency.

The present map shows the flood delineation in the area of Feres (Greece). The thematic layer has been derived from post-event satellite image using a semi-automatic approach. The estimated geometric accuracy is 5 m CE90 or better, from native positional accuracy of the background satellite image.
